LETTER FROM THE PRESIDENT

Dear Friend of Ohana One,

I am delighted to present to you the 2022 Annual Report, showcasing Ohana One's significant achievements, innovative initiatives, and unwavering commitment to transforming surgical care around the world.

At Ohana One, we have long recognized the invaluable role of mentorship in shaping one's career and fostering professional growth. Our core belief in the power of mentorship has led us to marry this concept with cutting-edge technology through our revolutionary Surgical Sight Program. This program has not only brought mentorship to the forefront but has also revolutionized the way surgical skills are imparted and shared globally.

In 2022, the Surgical Sight Program reached new heights, expanding its presence to an astounding 48 countries and serving over 130 surgeons. Using smart glasses, we have facilitated innovative, collaborative learning between mentors and mentees, as well as peer-to-peer knowledge exchange. This technology has proven to be a game-changer, enabling an unprecedented level of engagement and expertise sharing among surgeons worldwide.

We take immense pride in witnessing the transformative impact of the Surgical Sight Program on patient care. The knowledge gained, and skills honed by surgeons trained with Ohana One are being put into practice in their home countries, ensuring that children and adults receive the highest quality of care and paving the way for brighter futures. It is a joy to see the tangible difference our collaborative learning approach has made in improving healthcare outcomes locally and globally.

Furthermore, we embarked on a new initiative focused on mental wellness for surgeons,

recognizing the immense pressure and challenges they face in their demanding profession. By providing comprehensive support and resources for mental well-being, we aim to foster a healthy and resilient surgical community that can thrive both personally and professionally, in turn resulting in enhanced patient care around the world.

In addition to these remarkable milestones, we were thrilled to resume in-person missions to Ethiopia and Mozambique in 2022. These missions allowed us to directly engage with communities in need, extend our expertise, and make a lasting impact on the lives of countless individuals. The opportunity to work hand-in-hand with local surgeons and healthcare providers reaffirmed our commitment to building sustainable surgical capacity and empowering communities to take charge of their own healthcare.

None of these accomplishments would have been possible without the unwavering support and dedication of our supporters, our dedicated volunteer mentors, and the entire Ohana One family. Your belief in our vision and commitment to our mission has been the driving force behind our success.

As we delve into the pages of the 2022 Annual Report, we invite you to join us in celebrating the strides we have made and the lives we have touched. Your continued support and partnership inspire us to push the boundaries of what is possible and work towards a future where surgical care knows no boundaries.

Thank you for joining us on this incredible journey.

Warm regards,
David Kulber, MD
President, Ohana One Board of Directors

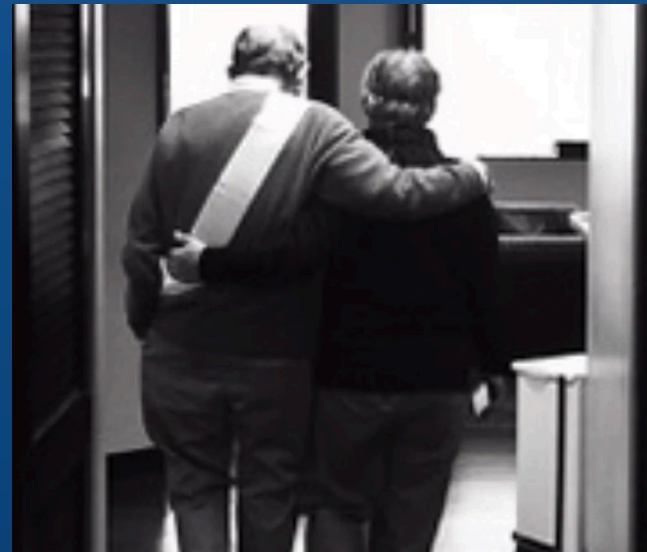

Precious Moments with My Mentor

By Dr. David Kulber

In the song by the Talking Heads, "Once in a Lifetime," David Byrne muses, "You may ask yourself, how did I get here?" As I approach my 25th year in practice, no longer the "young gun," I find myself looking around at my surroundings both at home and at the office, asking the same question. As we age, time has a way of speeding up, and once we become aware that we are on the clock, moments, especially the good ones, become more precious.

I first met Dr. Myles Cohen when I was a general surgery resident at Cedars Sinai. My first impression as an intern was that he was intense and held residents to seemingly unrealistic expectations. He was known as a person of integrity and principle, guided by the pursuit of excellence in everything he did, no matter how menial the task. He led by example, and in turn, every hospital committee wanted him as their chair. At the end of my residency, it was clear to me my focus was to be good enough to join Dr. Cohen in practice. I went off to the east coast for additional training in plastic surgery and a hand surgery fellowship. At the American Society for Surgery of the Hand (ASSH) meeting in San Francisco, I had lunch with Dr. Cohen and inquired about a job. Afterward, he sent me a several-page, handwritten letter in detail discussing all of the economic challenges that doctors face. It was overwhelming but accurate as to how medicine has subsequently unfolded.

When I joined Dr. Cohen the following year, he informed me that he would be in practice for just 3 to 5 more years before retiring. From day one he treated me not as a junior partner but as a colleague and friend. It was not until I worked with Dr. Cohen that I truly learned the art of medicine. I ran every case by him, and he helped me with the more difficult ones. Though my learning curve in the operating room was steep, I also learned

how to treat people and patients with respect in addition to the skill of training residents and fellows.

Dr. Cohen suffered from cardiac issues since the age of 27, and while in denial at times, he knew every day was special. We both knew we were on the clock, and we made a point to touch base daily.

Our enjoyment of practicing hand surgery, operating together, and sharing cases blossomed and the 5 years until retirement was put off again and again. Twenty-three years later, it was with mixed emotions that Dr. Cohen retired at age 77. Along the way we expanded our practice to 6 physicians and two PAs, started a hand fellowship, and published several papers. Whenever I'm in a bind I often ask myself, "what would Dr. Cohen do?"

On their last visit, I am happy to report that Dr. Cohen and his wife Cita appeared quite happy and healthy living in Denver close to their children. Sitting in what I still refer to as Dr. Cohen's office, I know how I got here...on the shoulders of a giant.

“

Feeling the appreciation and impact of my role as a surgical mentor continues to be one of the most fulfilling aspects of my medical career.”

Marshall Partington, MD
Ohana One Mentor

“

I mentor because I find it so gratifying to know that I can help patients I will never meet through the eyes and hands of the surgeons I train.”

Marc Levitt, MD
Ohana One Mentor

“

The surprising benefit for me was that my techniques evolved and developed as a result of this international work. “

Graham Watson, MD
Ohana One Mentor

Mentorship Matters

By Dr. Jennifer Beppe

Dr. Kurt McCammon has been the chairman at Eastern Virginia Medical School in the Department of Urology for almost 20 years. He epitomizes servant leadership, acting as not only an exceptional educator to residents and surgeons around the world, but also as someone who truly supports others throughout their career.

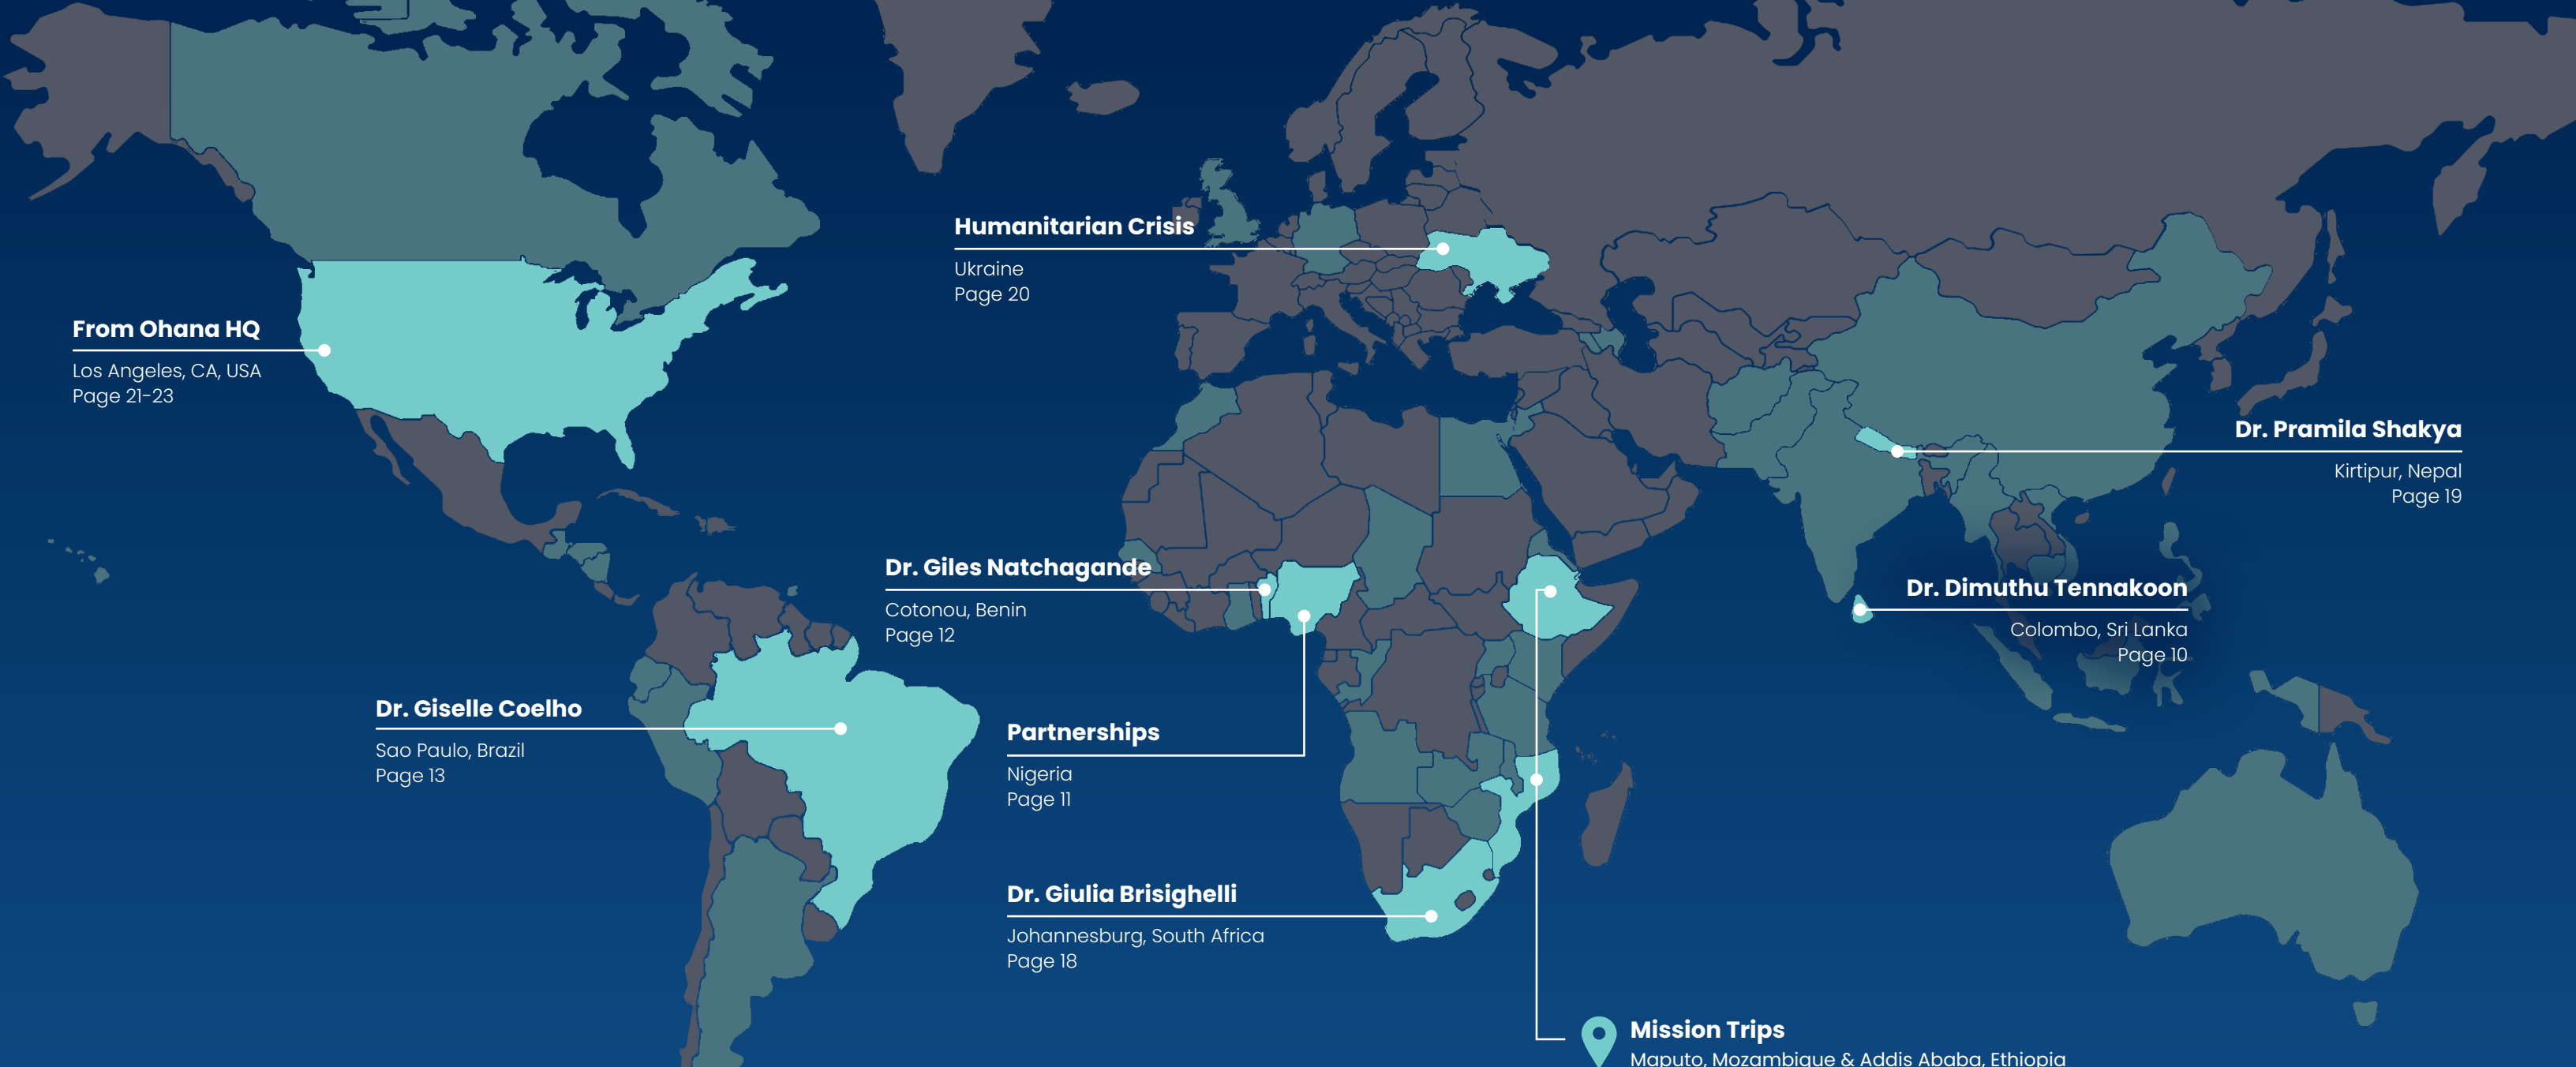

I consider myself fortunate to have been one of his residents and mentees in the urology program. He generously shared his extensive surgical knowledge, his compassionate and friendly approach to bedside manner, and his ability to manage life's various demands, both professionally and personally. Dr. McCammon played a significant role in helping me navigate the balance between my career and my family. During my tenure as chief resident, I became pregnant with twins and delivered them in the middle of my term. I remember being scheduled to take the annual in-service exam while also being placed on bed rest with concerns about a premature delivery. Dr. McCammon stood by me and remained my consummate voice of support, saying, "Your priority is your family. We will be here when you return. We support your education and your family." I was incredibly blessed to have him as my chairman during that time in my life, and he has been by my side throughout my career.

Dr. Kurt McCammon

Dr. McCammon was one of the first people I confided in when I decided to pursue a degree in informatics and step away from clinical practice. I was concerned about how my urology colleagues would react. Dr. McCammon affirmed my decision and provided unwavering support. He assisted me in various ways, including introducing me to Ohana One and inviting me to return as a visiting professor this summer. I am thankful to him for these opportunities to continue to pay it forward.

Dr. McCammon consistently prioritizes others over his own needs, exemplifying what it means to be a mentor. His incredible passion for service, evident through his dedication to teaching and international volunteer work, is inspiring. I am immensely grateful for his support and mentorship, and I'm honored to call him a friend.

Mission Trips

Maputo, Mozambique & Addis Ababa, Ethiopia

Stories Around The Globe

Our work is not limited to single mission trips, but to establishing long-term sustainable surgical training programs utilizing **mentorship relationships** and **advanced technology**. We strive to be a **trusted advisor** to the NGOs we partner with, supporting them in attaining their missions.

Each year, Ohana One leads mission trips to international locations, fostering strong relationships between local and visiting surgical teams while working together to achieve long-term skill training. In 2022, after a 2-year break due to COVID, Ohana One organized mission trips to Mozambique and Ethiopia. To further support these missions, Ohana One equips in-country surgical teams with smart glass technology, enabling ongoing year-round comprehensive training with their experienced surgeons. During these mission trips, surgeons and the entire team have the opportunity to:

- Collaborate with local hospitals
- Address the backlog of patients in need of surgical care
- Share complex surgical techniques
- Provide safety education to developing communities
- Connect with surgical professionals eager to enhance their training

Continued on Page 14-17

Helping Children With Club Foot Repair

Dr. Dimuthu Tennakoon chose to work in orthopedics after interning as a medical officer in orthopedics and is extremely passionate about his specialty. He is currently working on learning a variety of pediatric foot and ankle procedures with his mentor, Dr. Maryse Bouchard. He enjoys the planning of deformity correction with her and is grateful for the resulting improvement in decision-making for these conditions. For Dr. Tennakoon, this improvement and the ability to share his knowledge with colleagues from around the country is vital.

Although all types of surgical care are needed in Sri Lanka, orthopedic care is considered to be a priority, considering the immediate need for orthopedic procedures. Dr. Tennakoon disclosed that he is now able to help 5-6 new cases per week because of his time in the Surgical Sight Program.

One patient, in particular, has resonated with Dr. Tennakoon. This patient was a 3-year-old girl and sole survivor of a road traffic accident who presented with Bilateral Clubfoot. With help from Dr. Bouchard, he successfully treated her injuries with recasting, re-tenotomy, and tibialis anterior lateral transfer.

The Ohana One Surgical Sight Smart Glass Program has helped him through live surgical trainings, ongoing mentorship and education, guidance in decision making, and the sharing of knowledge. Especially during the pandemic and subsequent economic crisis making traveling overseas difficult, the Ohana One Surgical Sight Smart Glass Program has proven to be indispensable.

Before and after of 3-year-old patient with Bilateral Clubfoot. Dr. Tennakoon, below, treated her injuries and has greatly improved her quality of life.

PROFILE

- Colombo, Sri Lanka
- Orthopedic Surgeon
- Lady Ridgeway Hospital for Children
- NGO Steps 2 Walk

About Sri Lanka

Sri Lanka is ranked #40 in terms of healthcare with only 3 surgeons per 100,000 people in a population of 22.16 million people. Sri Lanka is in the midst of one of the worst socio-economic crises in its history. Its once robust and praised healthcare system is nearing collapse, with millions of people at risk of power shortages, a lack of medicines, and equipment shortages. In April 2022, there was a 40% increase in the cost of medication.

A Unique Solution For Rural Nigerian Healthcare

Ohana One partner NGO, Healing the Children, alerted us to a dire situation rural northern Nigerians face. Their primary care doctors have been lured away to Dubai and Abu Dhabi with higher pay, leaving residents in remote rural areas without access to basic care. **Dr. Mariette Ahmadi**, a Nigerian surgeon, was determined to find a solution for her fellow country people. After connecting with Dr. Ahmadi, Ohana One quickly responded with a grant of ten smart glasses and accompanying software to easily connect the community members with larger, urban medical clinics. In the hands of Nigeria's community liaisons, this technology is already greatly impacting patients in rural areas of the country!

Working in partnership with the Nigerian State Ministry of Health (SMOH), Dr. Ahmadi has staffed a call center with doctors on call 24/7. The SMOH and private donations have furnished the call center. The call center doctors are available to provide medical assistance virtually to the remote Primary Healthcare Clinics (PHC), which often do not have a doctor on staff. The Smart Glasses are located at the PHC and allow the call center doctors to do a virtual consultation with the PHC staff and their patients. This collaboration provides a level of care that was not available before the deployment of the smart glasses.

The SMOH is working to promote this service in rural areas through the distribution of FLYERS as well as radio programs. Tarek El-Shayal, a biomedical engineer from New York, has also volunteered to represent Ohana One as he travels to Nigeria this July to further assist their expanding efforts.

Smart glasses have vastly improved the capacity of locally run medical clinics. Thanks to the Ohana One smart glasses, they can now offer telehealth via regional medical centers. This is the only healthcare rural Nigerians can access without lengthy and expensive travel.

Please stay tuned for updates as we track the impact this project is having.

Revolutionizing Urological Care in Benin

Dr. Gilles Natchagande, has significantly enhanced his surgical skills and confidence in performing Percutaneous Nephrolithotomy (PCNL) procedures, thanks to the Surgical Sight Program. PCNLs are minimally invasive procedures used to remove kidney stones when the body is unable to pass them naturally. With the rising demand for PCNLs in Benin, Dr. Natchagande's mentorship relationships with Dr. Graham Watson and Dr. Kymora Scotland HAVE proven to be invaluable.

Dr. Natchagande' hospital lacks a Pediatric Urologus, so he must perform PCNLs on children. Thanks to the Surgical Sight Smart Glass Program, he now feels comfortable and confident performing PCNLs on both children and adults. He has even started training some of his colleagues.

Dr. Natchagande vividly remembers a four-year-old boy who required a PCNL. Dr. Watson virtually assisted Dr. Natchagande during a successful bilateral PCNL surgery on the child. Two years later, the boy's mother returned to express her gratitude to both Dr. Natchagande and Dr. Watson, creating a moment that will forever stay with him. Dr. Natchagande takes pride in the progress he has made in his surgical skills and remains optimistic about the continued positive impact of smart glass technology on his community.

In 2023, Dr. Natchagande anticipates performing PCNL procedures on 70-100 individuals – an increase from the previous year. Ohana One is thrilled to support Dr. Natchagande's training and eagerly await the accomplishments he will achieve this year.

PROFILE

-  Cotonou, Benin

-  NGO IVU Med

About Benin

Benin, with a population of 13 million people, is ranked #171 globally in terms of healthcare quality, having only 2 surgeons per 100,000 individuals. The country faces a severe shortage of doctors, with only four hospitals located within its borders. Moreover, 51% of the Beninese population resides in rural areas, far from hospitals and clinics.

Transforming Children's Lives in Brazil

Dr. Giselle Coelho's fascination with neuroanatomy and the physiology of brain function led her to the discovery of her life's purpose: neurosurgery. In her opinion, the most rewarding aspect of being a neurosurgeon is the ability to transform the lives of children by treating life-threatening pathologies. Currently, Dr. Coelho is working on mastering a procedure called Third Ventriculostomy combined with choroid plexus coagulation using flexible neuroendoscopy, with the guidance of her mentor, Dr. Michael Dewan.

Dr. Coelho emphasized that hydrocephalus affects 2 out of every 10,000 children in South America, making this project crucial in reaching a significant number of children with this diagnosis in Brazil and creating a noticeable social and economic impact in the country.

With the support of Dr. Dewan, Dr. Coelho successfully treated a 4-month-old boy diagnosed with hydrocephalus, experiencing a progressive increase in head circumference and developmental delays. The child underwent an endoscopic third ventriculostomy and choroid plexus coagulation, resulting in significant improvement within 30 days after the surgical procedure.

Dr. Coelho expressed that the Ohana One Surgical Sight Smart Glass Program has significantly enhanced her surgical training and continues to do so. It serves as an important complement to in-person training, enabling high-quality follow-up and distance learning. The program promotes continuing medical education, especially in the discussion of complex cases.

PROFILE

-  Sao Paulo, Brazil
-  Pediatric Neurosurgeon
-  Santa Casa Hospital and Sabará Hospital
-  NGO NeuroKids

About Brazil

Brazil was the first country in Latin America to receive training in performing Third Ventriculostomy through NeuroKids, a partner organization of Ohana One. Brazil is ranked #63 in terms of global healthcare, with a population of 214 million and 55 surgeons per 100,000 people. However, Brazil faces numerous barriers to accessible healthcare within the Public Brazilian Healthcare system, including issues with supply chain logistics, high healthcare costs, and political instability. Additionally, there is a lack of access to new technologies and surgical equipment.

MISSION TRIP TO MOZAMBIQUE

Supporting Communities Through Surgical Care

Throughout the past three years, the Surgical Sight Smart Glass Program allowed Ohana One mentors to maintain contact with local mentee surgeons and provide ongoing training. The mission trip to Mozambique presented an opportunity to further this vital work.

In a particularly exciting development, Ohana One was joined by a team of documentary filmmakers, including director Jay Roach, cinematographer Bill Pope, and documentarian Sharon Oreck. Their presence aimed to capture the important work and impact that Ohana One is making in the field.

Fatima, a single mother and sole provider for her two children, as well as her sister's children, had been struggling with macromastia for years. This condition caused chronic pain in her neck, back, and shoulder, severely impacting her daily life. The Ohana One team performed a reduction mammoplasty on Fatima, providing immediate relief from her pain. This life-changing surgery allowed Fatima to focus on her work and family without the burden of constant discomfort, significantly improving their overall quality of life. Notably, Fatima received this surgery free of charge due to donations from our supporters and friends.

Another patient, Walter, suffered severe burns to his neck and hand due to an accidental workplace explosion. The burns rendered his neck and hand non-functional. The Ohana One team, led by Dr. Pedro Santos, the very first mentee of the Surgical Sight Program, executed a complex surgery to restore functionality to Walter's hand. The procedure required utmost precision and skill to avoid further damage. Thanks to this surgery, Walter regained the use of his hand and has returned to the workplace – restoring his dignity and ability to support his family. Like Fatima, Walter received this life-changing surgery at no cost to him because of mission trip donations.

These stories represent just a glimpse of the immense impact that Ohana One's mission trips have on individuals, families, and entire communities.

Addressing a Need For Pediatric Surgical Care in South Africa

Dr. Guilia Brisighelli chose to specialize in pediatrics because she believed it would allow her to establish a strong connection with patients and positively impact their futures. Under the mentorship of Dr. Marc Levitt, she has focused on mastering Posterior Sagittal Anorectoplasty (PSARP) procedures for patients with anorectal malformations. Dr. Brisighelli now feels more confident in performing these specific procedures and successfully completes around 20 PSARPs and 12 pull-throughs per year. However, there is a waitlist of approximately 80 patients, highlighting the significant demand for these surgeries, especially when compared to high-income countries.

Dr. Brisighelli believes that witnessing the impact of her surgical care is intrinsically linked to providing proper colorectal follow-up for patients. Over the course of her 8-year professional relationship with Dr. Levitt, he emphasized the importance of long-term follow-up care and the value of sharing knowledge and uplifting others. Dr. Brisighelli strives to do the same in her own practice, and she believes that many families and fellow surgeons are benefiting from this approach.

We are proud to have Dr. Brisighelli as part of our Ohana, and we eagerly anticipate following her journey of surgical training and professional growth.

NGO Surgeons for Little Lives

About South Africa

South Africa is ranked #53 in terms of healthcare quality, with a population of 59.39 million people and approximately 11 surgeons per 100,000 individuals. The country faces significant health inequalities and increasing poverty levels.

PROFILE

Kirtipur, Nepal

Plastics + Reconstructive Surgery

Kirtipur Hospital

NGO ReSurge

About Nepal

Nepal is ranked #61 in terms of global healthcare, with a population of 30 million people and only 3 surgeons per 100,000 individuals. 25% of the population lives below the poverty line, surviving on just 50 cents per day. Geographic difficulties pose additional barriers to healthcare access since approximately 79% of the population resides in rural areas.

Healing Children With Reconstructive Surgery in Nepal

Since childhood, **Dr. Pramila Shakya** had a dream of becoming a doctor. She chose reconstructive surgery because she finds it rewarding to witness immediate changes in patients. Dr. Shakya has been a part of the Surgical Sight Smart Glass Program since 2020 and is currently working alongside her mentor, Dr. Lori Howell, on cases involving cleft lip, cleft palate, and craniofacial conditions.

Dr. Shakya has witnessed the direct impact of her surgical care on the quality of life of her patients and their families, which has deeply resonated with her and continues to motivate her. She shared a story about a two-year-old girl with bilateral facial clefts whom she worked on with Dr. Howell. The girl's parents were pleasantly surprised by the surgical outcome, as they initially had low expectations. Following the surgery, the girl's ability to eat and speak improved dramatically. The family felt a sense of relief, knowing that their daughter would grow up with increased confidence and the ability to interact more comfortably with others at school.

Through her participation in the Surgical Sight Smart Glass Program, Dr. Shakya's confidence has also grown. She values the program's ability to connect her with surgeons from other countries, allowing for collaborative case discussions, planning, and guidance during procedures. She describes the program as amazing and highly necessary in the present time.

Ohana One Donates Technology to Ukrainian Surgeons

In response to the ongoing humanitarian crisis in Ukraine, Ohana One has taken a proactive step by partnering with Vuzix and TeleVu to send twenty pairs of smart glasses to assist surgeons working under incredibly challenging conditions. The medical professionals in Ukraine have been overwhelmed by the influx of military and civilian casualties resulting from the Russian invasion. Despite the relentless demand for medical attention, doctors continue to work diligently while their fellow countrymen and women bravely defend their nation, with no end in sight to the conflict. Consequently, numerous medical facilities find themselves inundated and unable to cope with the overwhelming demand.

Marchelle Sellers, Ohana One's executive director, and Sharon Oreck, an Ohana One board member, personally delivered ten donated pairs of Vuzix M400 smart glasses, preloaded with TeleVu remote software, to the Meest-International shipping center in Glendale, CA. A dedicated Ukrainian volunteer then hand-delivered this technology to surgeons in Ivano-Frankivsk, Ukraine, in a demonstration of national pride. From there, the smart glasses were shared with hospitals in Lviv and Kyiv. This vital collaboration between Vuzix, TeleVu, MEEST, and the volunteer surgeons is what makes the Ohana One Surgical Sight Smart Glass Program possible!

The provided technology plays a pivotal role in assisting Ukrainian surgeons as they navigate the challenges of providing care to those injured in the war zone of Eastern Ukraine. The smart glasses offer indispensable support, empowering the surgeons to deliver crucial medical interventions more effectively and efficiently.

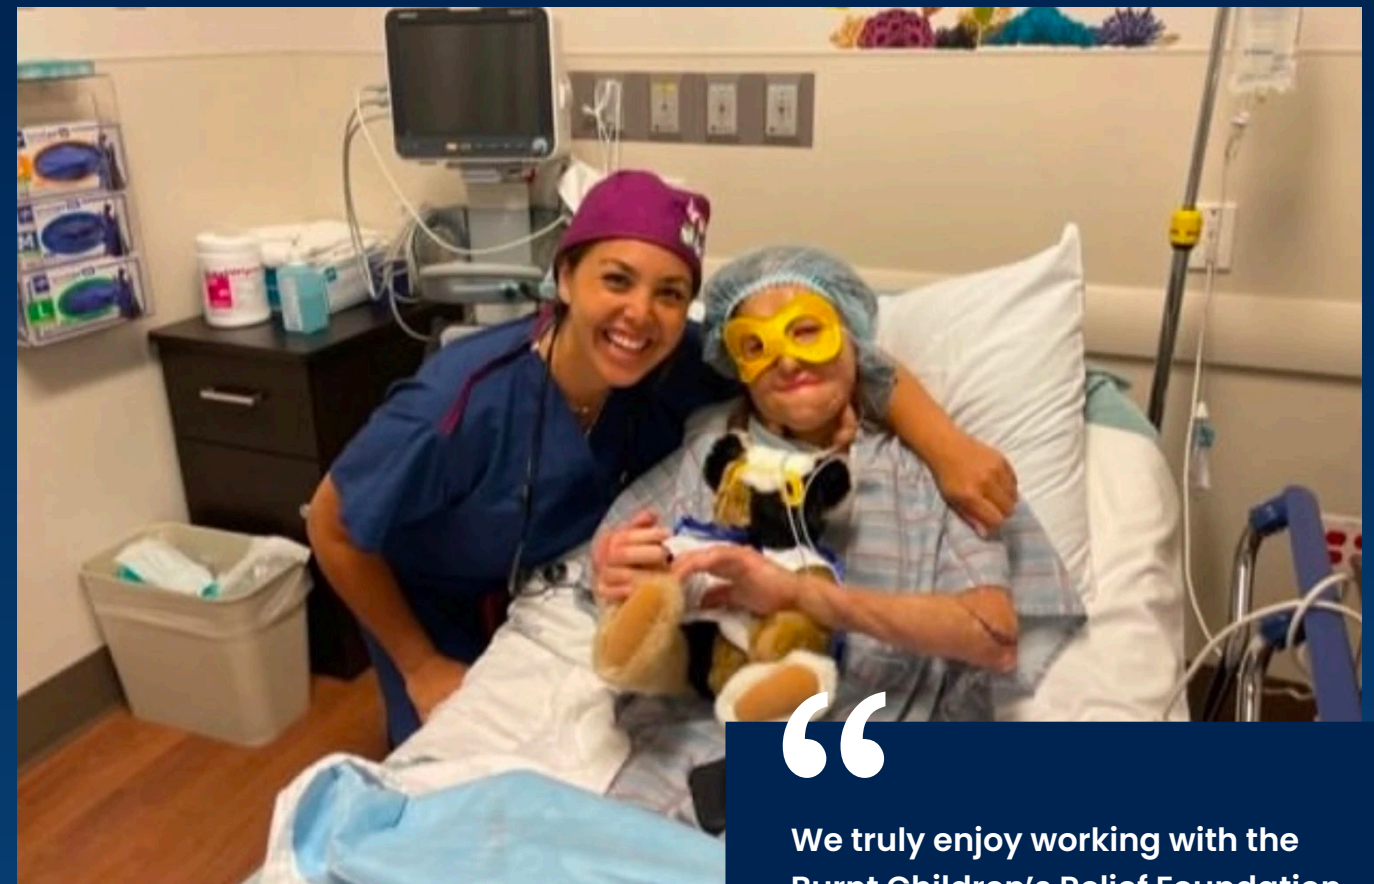

Ohana One remains committed to making a positive difference in global healthcare, and their

Scan here to watch Ohana One Board Member Sharon Oreck talks about our Ukraine relief efforts.

involvement in the Ukrainian crisis highlights their dedication to supporting medical professionals in times of immense need. By leveraging innovative technologies and collaborating with partners, Ohana One is ensuring that surgeons have access to the tools they require to save lives and alleviate suffering.

As the humanitarian crisis continues to unfold, Ohana One remains dedicated to supporting medical professionals on the front lines, providing them with the tools they need to save lives and restore hope in communities affected by conflict. Their unwavering commitment serves as a testament to the organization's vision of a world where healthcare knows no boundaries, ensuring that those in need receive the care they deserve, regardless of the circumstances.

Helping at Home

Ohana One partnered with MendingKids during their Hometown Mission to make a difference in the lives of children in the United States who are unable to access life-changing surgeries due to insurance limitations. The Ohana One team traveled to Long Beach, California to perform surgeries on children whose insurance does not cover the necessary procedures.

Additionally, Ohana One surgeons volunteered their services to operate on children through the Burnt Children's Relief Foundation, a partnership we have maintained for the past three years.

The dedicated volunteers from Ohana One included founders, Dr. Michele Dee, Dr. David Kulber, and Kylie Tanabe, PA.

“

We truly enjoy working with the Burnt Children's Relief Foundation because we have the privilege of working with the most remarkable patients! Each and every one of them is incredible, and it is absolutely amazing to provide them with the opportunity for a better quality of life by restoring the function of their hands. Their remarkably positive outlook on life and their ability to find happiness even in the darkest of circumstances are truly inspirational, and we are grateful to have them in our lives!

Kylie Tanabe, PA

”

Empowering Surgical Care Partnerships

In pursuit of our vision to transform surgical care globally, Ohana One's team works with various partner organizations to leverage our team's expertise and support their impactful initiatives. Through these partnerships, we aim to empower surgeons and healthcare providers in low- and middle-income countries, ultimately improving access to safe and effective surgical care for all. Let's take a closer look at some of the remarkable organizations we are proud to work with.

FIENS is a trailblazing organization dedicated to enhancing the care of individuals with neurological diseases worldwide by fostering education in neurosurgery. Through partnerships between established and emerging neurosurgical programs, FIENS provides hands-on training and education to neurosurgeons in low-resourced countries. Their volunteer neurosurgeons and personnel spend months on-site, working side-by-side with local neurosurgeons, teaching techniques, and setting up neurosurgery residency programs. This hands-on approach ensures the effective transfer of knowledge, positively impacting both surgeons and patients in these countries.

Global Initiative for Children's Surgery

GICS is on a mission to ensure that every child has access to safe surgical care. With a steadfast commitment to building optimal resources for children's surgery in resource-poor regions, GICS engages with providers of all disciplines of children's surgical care worldwide. Their network includes over 1,100 members from 66 countries, comprising physicians, surgeons, nurses, medical students, and other practitioners dedicated to improving outcomes for children's surgery.

InterSurgeon plays a crucial role in fostering global collaborations and improving surgical care worldwide. Through their interactive website, InterSurgeon brings individuals and organizations together to create partnerships that enhance surgical capacity in low- and middle-income countries. By leveraging the expertise of previously untapped resources, they facilitate learning and education, empowering healthcare providers to create their own opportunities for growth. InterSurgeon's membership-based platform enables all members of the surgical team and other stakeholders to contribute to strengthening surgical care.

Welcome New Board Members!

Ohana One welcomed three exceptional individuals to its board of directors in 2022. Their unique backgrounds and skill sets have enriched Ohana One's strategic decision-making, fostered innovation, and reinforced its commitment to revolutionizing the healthcare industry through advanced technology.

Bill Pope has an exceptional eye for detail, creative storytelling abilities, and a knack for transforming raw footage into captivating visuals. He used these unique talents working alongside fellow board members Jay Roach and Sharon Oreck during the filming of the upcoming Ohana One documentary.

Sharon Oreck is a respected professional known for her work as a filmmaker, producer, and branding consultant. Sharon brings a wealth of knowledge in storytelling, marketing, and strategic planning. Her strategic insights and innovative ideas have already helped to shape Ohana One's brand identity and marketing strategies.

Dr. Jennifer Bepple's extensive experience as a medical professional, coupled with her dedication to improving patient care, aligns perfectly with Ohana One's mission. Her in-depth knowledge of healthcare systems, clinical workflows, and patient needs, Dr. Bepple has already provided invaluable guidance in developing Ohana One's healthcare technology solutions.

Looking Ahead

2022 proved to be an exceptional year for Ohana One, and our ambitions for 2023 and beyond are even more remarkable. Our unique combination of technology and human expertise has revolutionized medical education, particularly in countries and regions that have historically lacked access to high-quality training.

Enabling surgeons to receive local training significantly increases the likelihood of them remaining in their home countries, where their services are desperately needed. Through the Surgical Sight Program, surgeons can acquire essential skills without having to leave their families and communities behind. The impact is both immediate and exponential as mentee surgeons evolve into mentors themselves, sharing their knowledge with colleagues.

Our board members Sharon Oreck, Bill Pope, and Jay Roach, all possessing extensive industry experience, have collaborated to produce a compelling documentary showcasing our work in Mozambique. We eagerly anticipate the film's premiere in New York and L.A. this fall and invite you to witness our achievements firsthand.

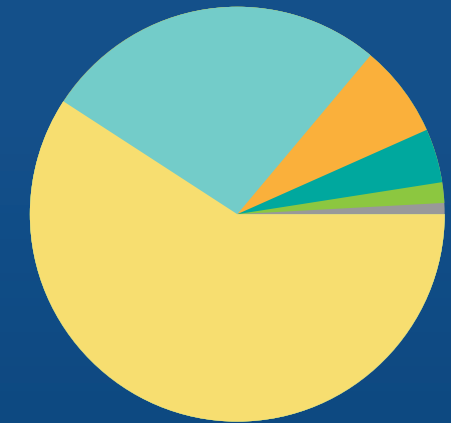

Our OO app nears completion, heralding a transformative era for surgeons in both LMICs and HICs. This app will grant access to our expanding educational video library, spanning seven specialties we support. Furthermore, we are excited to introduce new technologies and enhance existing products, offering a comprehensive suite of tools to cater to the diverse needs of our surgical community.

Driven by the same spirit of responsiveness, we have developed mental wellness resources for the dedicated surgeons we support. The relentless pressure and stress surgeons face worldwide, particularly in under-resourced countries, necessitates our commitment to providing them with tools to navigate these challenges. We are working alongside a team of experts to ensure that surgeons, who are genuinely changing the world, receive the support they require.

Stay updated with our latest developments by subscribing to our newsletter and following us on social media. There is much more to come, and we would be honored to have you join us on this journey.

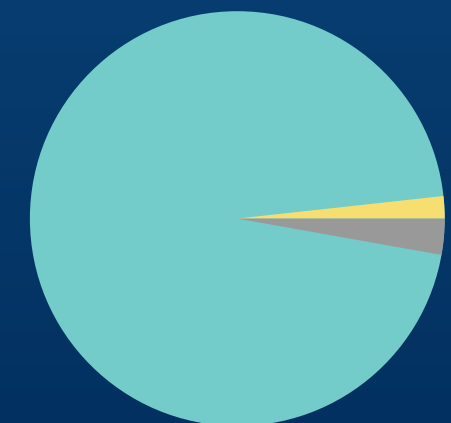

2022 Financials

SUPPORT & REVENUE

General Pledges and Donations	\$486,113
Grants From Foundations & Corp	\$155,500
Mission Trip Donations	\$65,000
Program Management Revenue	\$43,491
Special Project	\$15,000
Surgical Sight Revenue	\$4,095
TOTAL DONATIONS	\$769,199

EXPENSES

Direct Program Budget	\$578,095
Fundraising	\$24,829
Admin	\$14,102
TOTAL EXPENSES	\$617,026

Your donation will impact the lives of patients and surgeons worldwide!

Do you believe every person deserves access to the very best surgical care regardless of where they live? Do you believe that surgeons should have access to the very best training regardless of where they practice and live? If you do, then please make your tax-deductible donation to Ohana One, and make a direct impact on the health and lives of patients worldwide.
