

A midwife in Tanzania captures an ultrasound on a tablet. A surgeon in the U.S. coaches a team in Belize through an entire operation without a dropped call. A nurse pulls up a training video between shifts. Every story in this issue shows the same thing: the right tool closes the distance between expertise and the patients who need it.

In this issue, you'll find new specialty and regional groups in the Ohana One app that connect you with colleagues doing work like yours. You'll follow a surgery in Belize through the first of Ohana One's new use case cards, catch four new hospice and palliative care sessions in the Global Nursing Education Series, and get an up-close look at the Vave portable ultrasound, from Tanzania to a quick demo.

None of it happens alone. Thank you to the volunteers, mentors, partners and donors who believe geography should never decide who receives quality care, and thank you for being part of the Ohana One family.

Warmly,

Marchelle Sellers
Executive Director

New Use Cases Bring Mentorships to Life

Ohana One is excited to share new use case cards: one-page stories that follow a single mentorship case from start to finish, including the mentor, the mentee, the hospital and the technology that connected them.

The first card follows Dr. Moustafa Moustafa of Global Surgical Expedition as he coached Drs. Nelson Marin and Milagros Reyes from the U.S. through a laparoscopic gallbladder removal at Northern Regional Hospital in Orange Walk, Belize.

The milestone: the entire procedure ran on one uninterrupted video call. Dropped connections have forced past sessions to restart mid-case, so this is real progress for remote mentoring.

More cards are on the way, with a full library coming soon to the Ohana One website.

See all the Ohana One Case studies here.

New Sessions in the Global Nursing Education Series

Free, practical training for nurses and care teams, recorded so you can watch whenever it fits your schedule.

The newest sessions focus on hospice and palliative care:

- Wound Care and Infection Management
- Nutrition and Hydration in Palliative and End-of-Life Care
- Pain Management in Palliative and Hospice Care
- End-of-Life Care and Daily Care for Hospice Patients

You can watch the Global Nursing Education Webinars here.

Find Your People in the Ohana One App

New specialty and regional groups are opening inside the Ohana One app, so surgeons, nurses, midwives and trainees working in similar settings can find each other and talk shop.

To be placed in the right group, your profile needs a few details. It takes about 90 seconds:

- Open the Ohana One app and go to **Profile**.
- Add your role, specialty, hospital or institution, and country.
- Add a photo of your face. Colleagues answer people, not blank avatars.
- Tap **Save**.

Once your profile is complete, you'll be placed in the group that fits and start seeing cases, questions and sessions from people doing work like yours.

Complete your profile to join a group of colleagues doing similar work. Takes 90 seconds.

New to the app? Download it here:

Tech Tools: The Vave Portable Ultrasound

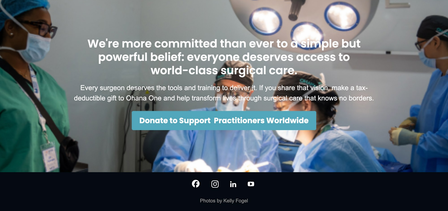

Up to 70 percent of pregnant women in low- and middle-income countries never receive an obstetric ultrasound, and those delays in care are a major cause of preventable maternal deaths. Vave, one of the technology tools Ohana One puts in the hands of care teams, is built to help close that gap.

How it works: A handheld probe pairs with a tablet app, so a trained provider can capture and review an ultrasound image at the bedside in seconds. No heavy machinery and no dedicated imaging room are needed.

In the field: The Ohana One team recently brought Vave to Tanzania for maternal health screenings. The trip also included the First Annual Hand and Upper Extremity Nerve Conference, held with Kilimanjaro Christian Medical Centre and partners at Handzania.

See it for yourself: Grace Berglin from the Ohana One team and her husband, Cyrus Berglin, walk through the probe and tablet app step by step in a short demo video.
